

STEWART/STAND

STAINLESS STEEL WALLET

The Boston Globe

Founded 1872

WHAT IS RFID? //

Radio-Frequency IDentification: Information stored in a chip on a debit card, credit card, enhanced driver's license, or passport. The information on these RFID devices is not encrypted and can be accessed without the owner's knowledge or authorization:

- » Account Number (cc #)
- » Full Name
- » Expiration Date
- » Full Billing information
- » Any data printed including your photo on a passport

THE SOLUTION //

In 2005 STEWART/STAND® introduced the world's first Anti-Identity Theft personal accessory. Our stainless steel wallet design naturally blocks RFID transmissions from credit cards, new passports + IDs that are RFID enabled.

RFID IN THE MEDIA //

Polish up on your RFID facts, check out our favorite videos and some print media that explain Identity Theft + RFID Technology. Short + sweet, take a few minutes to become an expert.

- » [Watch videos + read the articles on our RFID info page](#)
